### Flow Direction Automatic Transmission Flush Machine Equal Amount Exchange

#### Automatic Transmission Flush Machine Feature:

- Flow direction automatically controlled and equal amount exchange system
- Oil cycling flow speed monitor
- Change the oil by the power of gear-box and the exchanger
- Automatically shift to oil-extracting function after completed oil exchanging
- Effectively protect the gear-box and remove the grease and metal fillings
- Assure equal amount exchange

#### Automatic Transmission Flush Machine Function

1. Flow direction automatically controlled and equal amount exchange system
2. Oil cycling flow speed monitor
3. Change the oil by the power of gear-box and the exchanger
4. Assure equal amount exchange
5. Suit For : Gasoline / diesel vehicles
6. Automatically identify out and return flow direction of the fluid , preventing adverse consequences of misoperation.
7. The electronic valve controls the flow direction , preventing cross contamination of the new and old fluid.
8. Power supply has positive and negative self-correcting recognition function , to avoid damage to equipment control unit .
9. Monitored by electronic load cell and flow sensor , to double ensure that replacement precision .

#### Automatic Transmission Flush Machine Technical Parameter

Pressure gauge range	0-10bar
Fluid capacity	2 tanks , for new and old fluids
Tank capacity	6.6gallons
Standard Accessories	1 black hose , 1 red hose , 1 assorted fittings adapters and hose kit .
